About the Author		xx
Chapter 1	Introduction	1
	Initial Terminology	1
	Steps in the Development of Database Systems	3
	Database Requirements Collection, Definition, and Visualization	4
	Database Modeling	5
	Database Implementation	6
	Developing Front-End Applications	6
	Database Deployment	7
	Database Use	7
	Database Administration and Maintenance	8
	The Next Version of the Database	8
	Database Scope	8
	People Involved with Database Systems	8
	Database Analysts, Designers, and Developers	8
	Front-End Applications Analysts and Developers	9
	Database Administrators	9
	Database End Users	9
	Operational Versus Analytical Databases	9
	Relational DBMS	10
	Book Topics Overview	10
	Key Terms	11
	Review Questions	11
PART I	**OPERATIONAL DATABASES**	13
Chapter 2	Database Requirements and ER Modeling	13
	Introduction	13
	Basic ER Modeling Constructs	13
	Entities	14
	Attributes (Unique and Non-Unique)	14
	Relationships	14
	Cardinality Constraints	14
	Types of Relationships (Maximum Cardinality-Wise)	16
	Relationships and Relationship Instances	17
	Relationship Attributes	18
	Example: Set of Database Requirements and ER Diagram	19
	Composite Attributes	20
	Composite Unique Attributes	21
	Multiple Unique Attributes (Candidate Keys)	22
	Multivalued Attributes	22
	Derived Attributes	22
	Optional Attributes	23
	Example: Entity Containing Various Types of Attributes	24
	Exact Minimum and Maximum Cardinality in Relationships	24

Unary Relationships and Relationship Roles 25
Multiple Relationships Between Same Entities 26
Weak Entity 26
Naming and Drawing Conventions for Entities, Attributes, and Relationships 29
Multiple ER Diagrams 29
Example: Another Set of Database Requirements and an ER Diagram 31
Database Requirements and ER Model Usage 32
Various ER Notations 34
Enhanced ER (EER) 35
Summary 45
Key Terms 48
Review Example 48
Review Questions 49
Exercises 49
Mini Cases 52

Chapter 3 **Relational Database Modeling** 57
Introduction 57
Relational Database Model: Basic Concepts 57
Primary Key 59
Mapping Entities into Relations 59
Mapping Entities with Composite Attributes into Relations 60
Mapping Entities with Unique Composite Attributes into Relations 60
Mapping Entities with Optional Attributes into Relations 61
Entity Integrity Constraint 61
Foreign Key 62
Mapping Relationships into Relational Database Constructs 62
Mapping 1:M Relationships 62
Mapping M:N Relationships 65
Mapping 1:1 Relationships 67
Referential Integrity Constraint 68
Example: Mapping an ER Diagram into a Relational Schema 69
Granularity of the Table 70
Mapping Entities with Candidate Keys (Multiple Unique Attributes) into Relations 71
Mapping Entities with Multivalued Attributes into Relational Database Constructs 72
Mapping Entities with Derived Attributes into Relations 73
Example: Mapping an Entity Containing Various Types of Attributes into a Relational Schema 74
Mapping Unary Relationships 75
Mapping 1:M Unary Relationships 75
Mapping M:N Unary Relationships 75
Mapping 1:1 Unary Relationships 76
Mapping Multiple Relationships Between the Same Entities 77
Mapping Weak Entities 77
Example: Mapping Another ER Diagram into a Relational Schema 80
Relational Database Constraints 82
Implicit Constraints 82
User-Defined Constraints 82
Summary 89
Key Terms 90
Review Example 91
Review Questions 92
Exercises 93
Mini Cases 96

Chapter 4 **Update Operations, Update Anomalies, and Normalization** 97
Introduction 97
Update Operations 97
Insert Operation Example 97
Delete Operation Example 98
Modify Operation Example 98
Update Operation Terminology Note 98
Update Anomalies 98
Example Scenario 98
Example Relation (Containing Redundant Data) 99
Insertion Anomaly 101
Deletion Anomaly 101
Modification Anomaly 101
Functional Dependencies 101
Functional Dependency Notations 102
Functional Dependencies Example 102
Streamlining Functional Dependencies 104
Augmented Functional Dependencies 104
Equivalent Functional Dependencies 105
Types of Functional Dependencies 106
Partial Functional Dependency 107
Full Key Functional Dependency 107
Transitive Functional Dependency 108
Another Functional Dependencies Example 108
Normalization 110
First Normal Form (1NF) 110
Second Normal Form (2NF) 113
Third Normal Form (3NF) 114
3NF and Other Normal Forms 115
Eliminating Redundancy and Resolving Update Anomalies 116
Another Normalization Example 117
Key Terms 125
Review Questions 125
Exercises 125

Chapter 5 **SQL** 133
Introduction 133
SQL Commands Overview 133
Data Definition Language (DDL) 133
Data Manipulation Language (DML) 134
Data Control Language (DCL) and Transaction Control Language (TCL) 134
SQL Data Types 134
Brief SQL Syntax Notes 134
CREATE TABLE 135
DROP TABLE 138
INSERT INTO 138
SELECT 141
Column Alias 143
Additional Keywords Used with SELECT 143
WHERE 143
DISTINCT 144
ORDER BY 144
LIKE 146
Aggregate Functions 146
GROUP BY 148

HAVING 151
Nested Queries 154
IN 156
JOIN 158
Table Alias 160
Combining Join with Other Functionalities 161
Joining Multiple Relations 161
Alternative Join Notation 162
ALTER TABLE 164
UPDATE 164
DELETE 165
CREATE VIEW and DROP VIEW 165
Set Operators: UNION, INTERSECT, EXCEPT (MINUS) 166
WITH 168
Window Functions 169
Additional SQL Examples with Additional SQL Commands 171
CREATE TABLE (Additional Example) 171
INSERT INTO (Additional Example) 174
Constraint Management 177
SELECT (Additional Examples) 178
Join of a Relation with Itself (Self-JOIN) 178
INNER and OUTER JOIN 178
Join Without Using a Primary Key/Foreign Key Combination 180
IS NULL 181
EXISTS 181
NOT 182
Alternative Queries 182
Inserting from a Query 183
Other SQL Functionalities 183
SQL Syntax Difference Note 1: DATE and TIME Data Types 185
SQL Syntax Difference Note 2: FOREIGN KEY 185
SQL Syntax Difference Note 3: Usage of AS Keyword with Aliases 186
SQL Syntax Difference Note 4: ALTER TABLE 186
SQL Syntax Difference Note 5: Set Operators 187
SQL Syntax Difference Note 6: FULL OUTER JOIN 188
SQL Syntax Difference Note 7: Constraint Management 188
SQL Syntax Difference Note 8: GROUP BY 188
SQL Syntax Difference Note 9: LIMIT and OFFSET 189
Key Terms 191
Review Example 191
Review Questions 196
Exercises 196
Mini Cases 200

Chapter 6 Database Implementation and Use 202
Introduction 202
Referential Integrity Constraint: Delete and Update Implementation 202
Delete Options 203
Update Options 206
Implementing Delete and Update Options 208
Implementing User-Defined Constraints 210
CHECK Clause 210
Other Mechanisms for Implementing User-Defined Constraints 211
Indexing 212
Database Front End 217

Data Quality Issues 221
Key Terms 226
Review Questions 226
Exercises 227

PART II ANALYTICAL DATABASES 231

Chapter 7 Data Warehousing Concepts 231
Introduction 231
Analytical Versus Operational Information 231
Data Makeup Differences 232
Technical Differences 233
Functional Differences 234
The Data Warehouse Definition 237
Structured Repository 237
Integrated 237
Subject Oriented 237
Enterprise Wide 237
Historical 237
Time Variant 238
Retrieval of Analytical Information 238
Detailed and/or Summarized Data 238
Data Warehouse Components 238
Source Systems 239
Data Warehouse 240
Extraction-Transformation-Load (ETL) 240
Data Warehouse Front-End (Business Intelligence) Applications 240
Data Marts 241
Steps in Development of Data Warehouses 241
Requirements Collection, Definition, and Visualization 242
Data Warehouse Modeling 243
Creating the Data Warehouse 243
Creating ETL Infrastructure 243
Developing Front-End (BI) Applications 244
Data Warehouse Deployment 244
Data Warehouse Use 244
Data Warehouse Administration and Maintenance 244
The Next Version of the Data Warehouse 244
Key Terms 245
Review Questions 245

Chapter 8 Data Warehouse Modeling 246
Introduction 246
Dimensional Modeling: Basic Concepts 246
Initial Example: Dimensional Model Based on a Single Source 247
Characteristics of Dimensions and Facts and the Analysis of the Initial Example 251
Expanded Example: Dimensional Model Based on Multiple Sources 254
Additional Possible Fact Attributes 258
Transaction Identifier in the Fact Table 258
Transaction Time in the Fact Table 260
Multiple Fact Tables in a Dimensional Model 261
Detailed Versus Aggregated Fact Tables 265
Detailed Fact Table 266
Aggregated Fact Table 266
Detailed Versus Aggregated Fact Table 269

Granularity of the Fact Table 269
Detailed Fact Tables: Line-Item Versus Transaction-Level 270
Slowly Changing Dimensions and Timestamps 271
Type 1 Approach 271
Type 2 Approach 271
Type 3 Approach 273
Normalized Data Warehouse 275
An Example of a Normalized Data Warehouse 276
Dimensionally Modeled Data Warehouse 279
Independent Data Marts 280
Key Terms 282
Review Example 283
Review Questions 285
Exercises 285
Mini Cases 295

Chapter 9 **Data Warehouse Implementation and Use** 297
Introduction 297
Creating a Data Warehouse 297
ETL: Extraction-Transformation-Load 299
Online Analytical Processing (OLAP) 305
OLAP/BI Tools 305
OLAP/BI Tools Functionalities 306
Slice and Dice 308
Pivot (Rotate) 309
Drill Down and Drill Up 309
Additional OLAP/BI Tools Functionality Note 310
OLAP/BI Tools Purpose 311
Data Warehouse / Data Mart Front-End (BI) Applications 312
Executive Dashboard 315
Data Warehouse Deployment 315
Key Terms 317
Review Questions 317
Exercises 317

Chapter 10 **Big Data and Data Lakes** 320
Introduction 320
Big Data Definition 320
MapReduce 321
Example: Three Types of Data Sets in a Corporation 324
Industrial Equipment Rental Company—Operational Database (Simplified Example) 324
Industrial Equipment Rental Company—Data Warehouse (Simplified Example) 325
Industrial Equipment Rental Company—Big Data Set (Simplified Example) 326
Industrial Equipment Rental Company—Big Data as a Source for a Data Warehouse (Simplified Example) 329
Corporate Use of Big Data 330
Data Lakes 331
Comparing Data Warehouses and Data Lakes 332
Combining the Use of Data Warehouses and Data Lakes 333
Key Terms 334
Review Questions 334

PART III OTHER TOPICS 335

Chapter 11 Overview of DBMS Functionalities and Database Administration 335
Introduction 335
DBMS Components 335
Database Administration Overview 336
Monitoring and Maintaining the Database System 336
Data Dictionary 337
Securing the Database Against Unauthorized Access 338
Providing Database Backup and Recovery 340
Ensuring Database Integrity 341
Optimizing Database Performance 341
Developing and Implementing Database Policies and Standards 342
Key Terms 343
Review Questions 343

Glossary 344
Index 354

Articles on the following topics are available at the Instructor and Student Resources sites to supplement the chapters.

Enhanced ER Modeling (EER)
Further Notes on Normalization and Higher Normal Forms
Enterprise Resource Planning (ERP)
Data Governance and Master Data Management
Further Notes on SQL Windows Functions
Data Mining
NoSQL Databases
